

Level	Below Basic	Basic	Proficient	Advanced
<p align="center"><b>Policy PLDs</b> <b>(Performance Level Descriptors)</b></p> <p>General descriptors that provide overall claims about a student's performance in each performance level; used to broadly articulate the goals and rigor for the state's performance standards.</p>	<p>Students at the below basic level in science require extensive support or provide little or no evidence in meeting the standard.</p>	<p>Students performing at the basic level in science are able to identify concepts and processes that explain the natural world. With support, they are able to use inquiry to generate scientific information to make decisions. These students are able to implement limited use of technological tools and communication skills.</p>	<p>Students performing at the proficient level in science understand the dynamic nature of science and use unifying concepts and processes that explain the natural world. They use inquiry to generate and validate scientific information and apply scientific information to make informed decisions about societal issues. These students are able to employ a variety of appropriate technological tools and communication skills.</p>	<p>Students performing at the advanced level in science understand the dynamic nature of science and make connections among unifying concepts and processes to explain the natural world. They are able to extend inquiry to analyze and synthesize scientific information to generate new questions. These students are able to construct personal knowledge independently and apply and critique scientific information to make informed decisions about societal issues. They employ a variety of appropriate technological tools and communication skills.</p>
<p align="center"><b>Cognitive Complexity</b></p>	<p>The cognitive complexity for students at this level includes those who have difficulty with skills to recognize, use, identify, describe, and recall scientific information.</p>	<p>The cognitive complexity for students at this level includes those who recognize, identify, describe, and recall scientific information with support.</p>	<p>The cognitive complexity for students at this level includes those who recognize, use, identify, describe, and recall scientific information.</p>	<p>The cognitive complexity at this level includes students who reach a higher level of thinking, requiring frequent responses citing evidence, drawing conclusions, explaining phenomena, and using concepts to solve problems.</p>

Range PLDs				
Describes the expectations for students across each standard and proficiency level; reflects the knowledge, skills, and processes that are expected of students.				
Grade 4 Science				
Standard:	Below Basic students may or may not be able to :	Basic students:	Proficient students:	Advanced students (in addition to proficient):
<p>Science is a dynamic process; concepts and content are best learned through inquiry and investigation. Concepts in LIFE SYSTEMS, EARTH and SPACE SYSTEMS, and PHYSICAL SYSTEMS are taught within the context of the following Unifying Concepts and Processes of Science:</p> <ul style="list-style-type: none"> <li>• Systems, classification, order and organization</li> <li>• Evidence, models, and explanations</li> <li>• Change, constancy, and measurement</li> <li>• Evolution and equilibrium</li> <li>• Form and function</li> </ul> 	<ul style="list-style-type: none"> <li>• Demonstrate a limited ability to identify concepts and processes that explain the natural world.</li> </ul>	<ul style="list-style-type: none"> <li>• Demonstrate an accurate understanding of some basic science facts and principles that explain the natural world.</li> </ul> <p><b>With support:</b></p> <ul style="list-style-type: none"> <li>• Make connections to related unifying concepts and processes.</li> <li>• Identify some of the concepts and processes that explain the natural world. They describe and record some characteristics of objects and living things.</li> <li>• Demonstrate or explain: stages in life cycles of plants and animals, changes in the earth and sky, or changes in states of matter.</li> </ul>	<ul style="list-style-type: none"> <li>• Identify and apply unifying concepts and processes to explain the natural world.</li> <li>• Demonstrate an accurate understanding of science content in the context of major concepts and processes. They give examples of observable cycles and change - such as changes in objects in the sky, states of matter, and life cycles - and explain ways to measure or record those changes.</li> <li>• Show connections between living things, their needs, and their environments. Students use observable characteristics to describe, compare, and classify objects and living things.</li> <li>• Describe, predict, investigate, and record findings about physical phenomena and how forces affect objects.</li> <li>• Students explain, classify, organize, model, illustrate, observe, and predict, which extend beyond a habitual response.</li> </ul>	<ul style="list-style-type: none"> <li>• Make connections among unifying concepts and processes to explain the natural world.</li> <li>• Make connections among unifying concepts and processes.</li> <li>• Identify adaptations of plants and animals that enhance survival in their environments and explain how environmental changes could affect survival.</li> <li>• Compare cycles of change to see patterns and interrelationships among them.</li> <li>• Make generalizations about cause-effect relationships in the physical world.</li> </ul>
